

Greek and Modern Astronomer's Timelines

Using your notes, you will create a timeline for the Greek Astronomers and a timeline for the Modern Astronomers.

(That's two timelines.)

Your timelines must include the following:

- 1) All ten astronomers mentioned in your notes must be included. (Don't forget Aristarchus)**

- 2) They must be placed in order by date on the timeline. Include the date of their life on your timeline. (B.C. is older than A.D) (B.C. 384 is older than B.C. 190)**

- 3) In one sentence, you must include what the astronomer is famous for on your timeline.**

- 4) Please include a picture that illustrates each astronomer's achievements.**
